

Github Collaboration

Role Playing: GitHub Collaboration Cycle

Before starting, click Sync Changes to make sure your local repository is up to date.

Role	Tasks
Branch Creator	- Create a new branch named <code>test</code>. - Switch to the <code>test</code> branch. - Create two new files: <code>content/project/_index.md</code> and <code>content/project/test/index.md</code> - <code>content/project/TEST/index.md</code> and add title "Test". - Stage the changes. - Commit. - Publish the new branch to GitHub.
Content Editor	- Click Fetch. Click Sync Changes. - Switch to the <code>test</code> branch. - Open <code>content/project/test/index.md</code>. - Add one or two sentences. - Stage the changes. - Commit and Sync. - Open the "GitHub Pull Request" panel. - Create a Pull Request. Merge: <code>test</code> Base: <code>main</code>.
Code Reviewer	- Fetch and Sync Changes. - Review the Pull Request. - Check that the changes look correct. - Add the following review comment: "Request: Add author"
Revision Author	- Fetch and Sync Changes. - Review the Pull Request. - Edit <code>content/project/test/_index.md</code> as requested. - Stage the changes. - Commit. - Verify that the Pull Request has been automatically updated.
Maintainer	- Fetch and Sync Changes. - Review the final changes in the Pull Request. - Confirm that the review request has been addressed. - Merge the Pull Request. - Switch to the <code>main</code> branch and Sync. - Check the updates. - Delete <code>test remote</code> branch.

After this cycle, all students do the following:

- Switch to the `main` branch.
- Fetch (Prune) and Sync Changes.
- Confirm that `content/project/test/index.md` file has been updated.
- Delete `test` (local) branch.
